

React Interview Questions

90% of Candidates Can't Answer

**Everyone prepares for
useState & useEffect.
Senior engineers get
asked something else.**

1. setState inside useEffect (no deps)

Most say: “infinite loop”

But interviewers care about:

- **Render → Effect → State update**
- **Re-render cycle**
- **Why React keeps triggering it**

2. What is “Tearing” in React?

UI showing inconsistent data during async rendering

Senior angle:

- **Why it happens**
- **How Concurrent features fix it**

3. useEffect vs useLayoutEffect

Not theory. Real use case.

- **When exactly they run**
- **Before vs after paint**
- **Impact on UI flicker**

4. React app WITHOUT a bundler

This question filters real understanding

- **ES Modules**
- **CDN imports**
- **What JSX actually becomes**

5. Zombie Child problem (Redux)

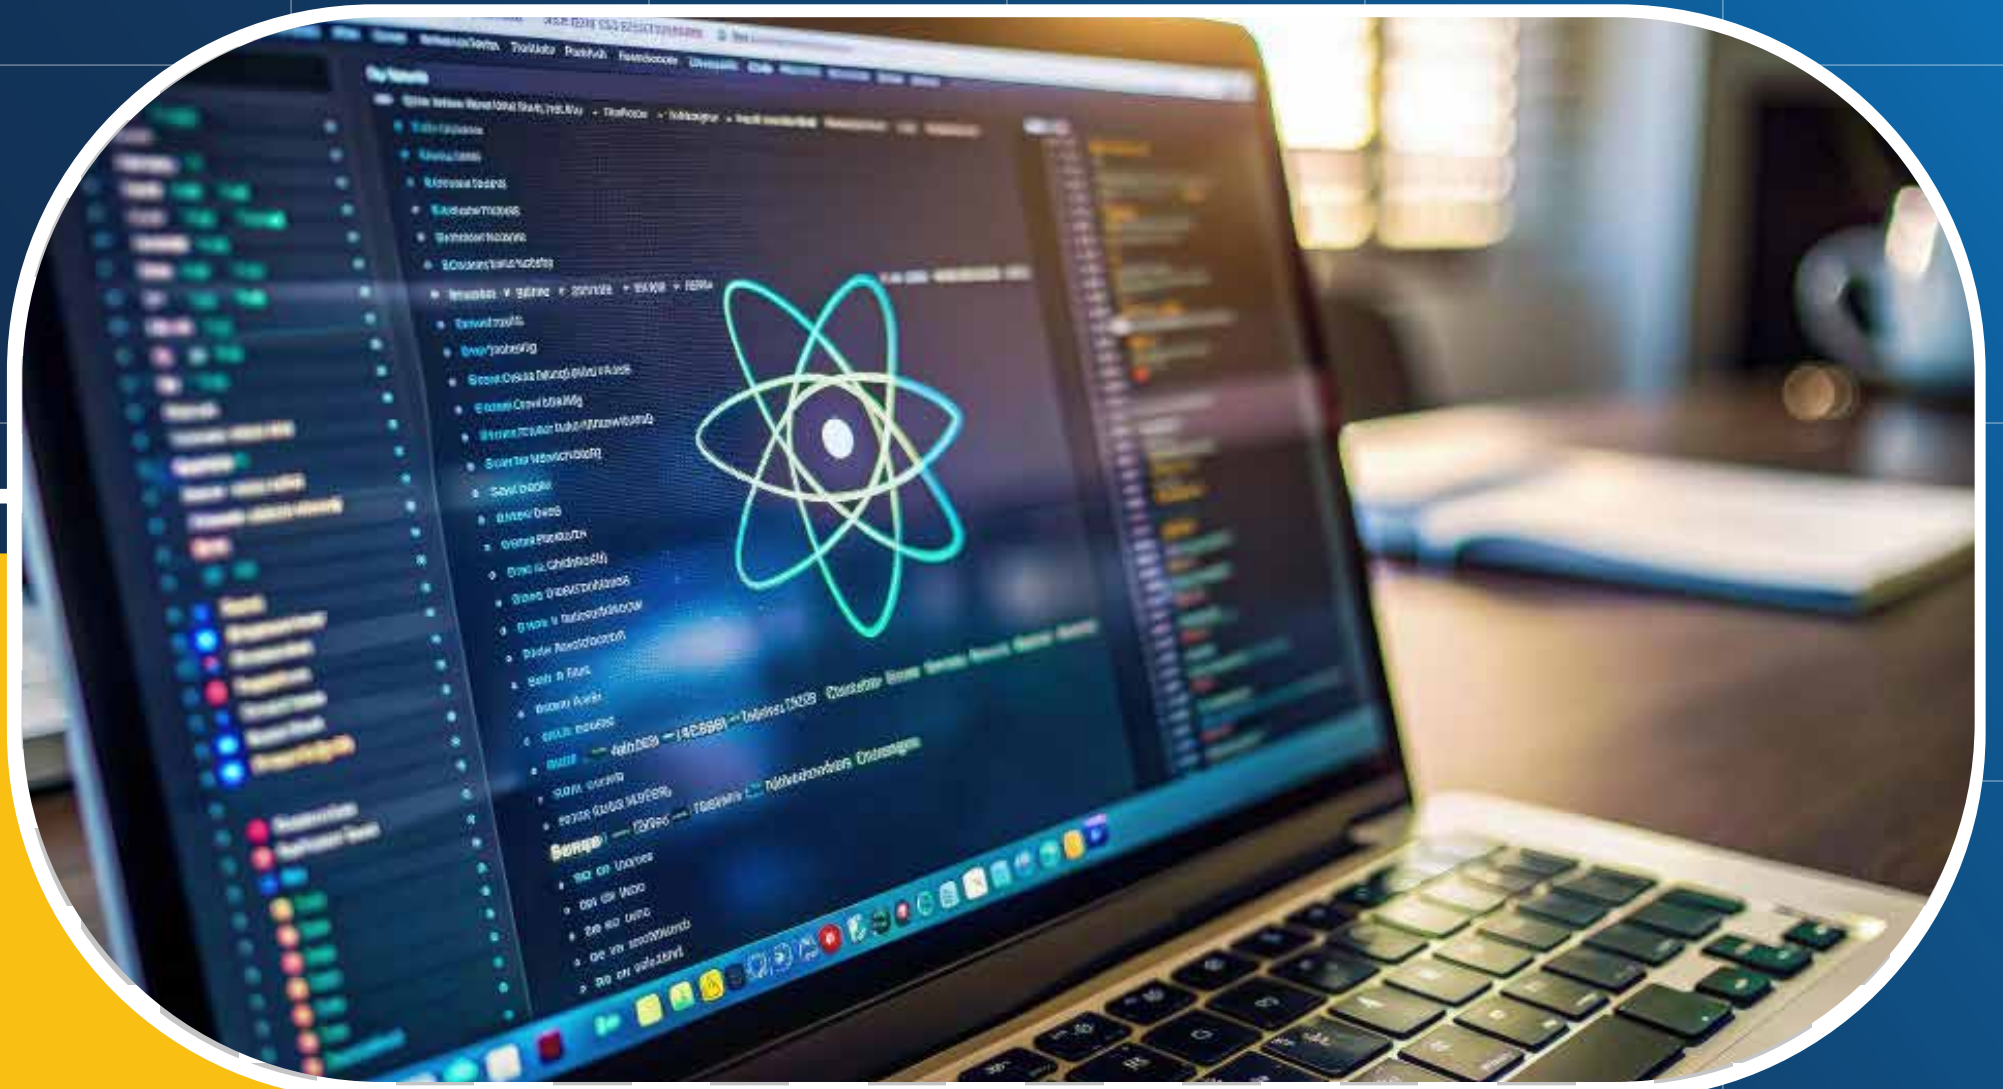

Rare but deadly bug

- **Component reads deleted state**
- **Causes inconsistent UI**

Can you prevent it?

6. Component inside component?

Looks harmless.

But:

- **Breaks reconciliation**
- **Recreates component every render**
- **Leads to subtle bugs**

7. Stale Closure problem

Why your hook reads old values

→ **Closures + React lifecycle**

→ **Fix with deps / refs**

This one trips even experienced devs

8. React Portals (real usage)

Not just definition

- **Modals**
- **Tooltips**
- **Escaping overflow issues**

When do you actually need them?

9. React without JSX?

Yes.

→ **React.createElement()**

→ **JSX is just syntax sugar**

Knowing this = deeper understanding

10. Hydration & Next.js errors

This is everywhere now

- **SSR + client mismatch**
- **Why hydration fails**
- **How to debug it**

If you care about real engineering, not just tutorials

Follow Deval Patel

- **Systems thinking**
- **Real-world dev problems**
- **What actually matters in production**
